[+](#) SHARE [f](#) [t](#) [e](#) ...

Cypress Envirosystems' wireless pneumatic thermostat (WPT) enables automatic scheduling of temperature setpoint changes, automatic calibration, and remote monitoring of temperature and pressure. Installed without disrupting existing systems, the unit controls and tracks after-hours HVAC usage. The thermostat features an override button that provides detailed information about the time and nature of the override. The WPT can be used as a standalone unit or be integrated with existing building automation systems via a BACnet/IP interface.
